

KELTEC BALE SLICE

***Remove plastic and netting
while splitting the bale...***

- ***Bale Slice will remove plastic and net while splitting the bale***
- ***Split the bale directly on the feed passage or into round feeders***
- ***Split the bale and feed the bale into a diet feeder***
- ***Bale slice cuts silage, hay & straw bales with ease***

BALE SLICE

Remove plastic and netting while splitting the bale...

Two extra wide plastic grips get a good hold of the plastic every time!

Features / Benefits

- Innovative design, cutting up means the bale does not fall on the plastic when split and forces the plastic into the plastic grip at the top ensuring a strong hold every time.
- Can also be used to split hay and straw bales.
- Because of the wide grip bale slice will remove 90% of the twine from a hay or straw bale while splitting it.
- The plastic and netting never fall below the level of the tines in the slice, making it very suitable for feeding into diet wagons and circular feeders as well as directly onto a feed passage.
- Bale slice uses hydraulic sequencing to operate the plastic grip therefore only requires one spool valve to operate the cutting jaw and the plastic grip.
- Can be fitted to any loader or tractor mounted front loader.
